

SAP Certified
integration with SAP S/4HANA Cloud Public Edition

SEAMLESS INTEGRATION MEETS SPEED

Connect third-party systems to SAP S/4HANA quickly and seamlessly

A standardized, certified SAP cloud interface for public cloud, private cloud, and on-premise. It keeps your core clean and runs directly in the system or on SAP Business AI Platform.

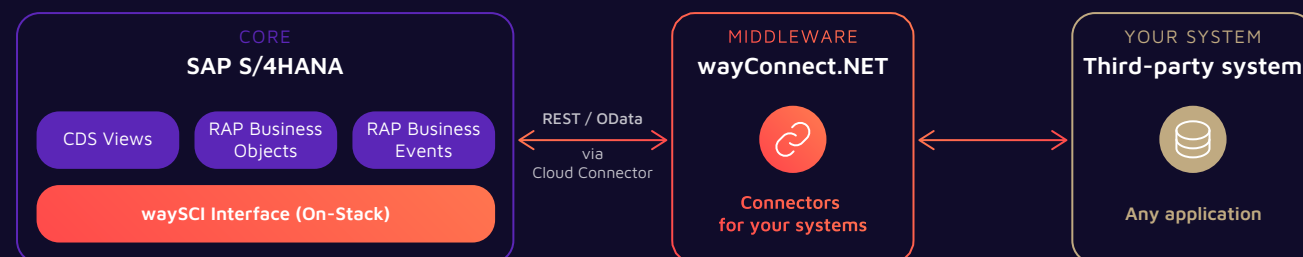

The challenge

Connecting third-party systems to SAP S/4HANA often means custom development, modifications to the SAP standard, and significant maintenance work with every release.

The solution

With waySCI, valantic offers an SAP-certified cloud interface that delivers fast, high-performance connections to third-party systems without touching the SAP standard. Predictable costs, one point of contact.

How it works

Deployment:
By default, it runs directly in SAP S/4HANA with no data duplication. If SAP Business AI Platform is a better fit for your IT strategy, it can run there as well.

What you get

- Strictly standard**
Only SAP-released interfaces, no modifications. Your system keeps a clean core and stays upgrade-ready.
- One interface for everything**
All third-party systems are connected centrally instead of through multiple point solutions.
- Extensible to your needs**
Custom extensions are possible at any time without compromising your clean core.
- Up and running fast**
Preconfigured standard APIs speed up implementation and reduce effort.
- Built for high data volumes**
Process large volumes of data quickly and efficiently. Delta management transfers only data that has changed.
- Predictable and future-proof**
Release compatibility, guaranteed updates, and transparent subscription pricing.

Ideal for companies that

- use SAP S/4HANA (public cloud, private cloud, or on-premise)
- are committed to a consistent clean core strategy
- process large data volumes or connect multiple third-party systems

WHICH THIRD-PARTY SYSTEMS WOULD YOU LIKE TO CONNECT TO SAP S/4HANA? GET IN TOUCH—WE'RE HAPPY TO HELP.
